👥 Phase 3: Stakeholder Analysis & Power-Interest Matrix

Document Code: SA-001

Project: Duplicate Bin Ecosystem

Methodology: PMI Standard Stakeholder Engagement & Mendelow Power-Interest Grid

Target Audience: Product Management, Delivery Team, Interview Evaluation Panels

1. Stakeholder Identification & Profile Matrix

Every stakeholder identified below is directly derived from actual roles, workflows, components, and documentation in the Duplicate Bin repository.

Stakeholder ID	Stakeholder Name & Role	Organizational Domain	Primary Responsibilities	Key Goals & Expectations	Core Pain Points	System Touchpoints
SH-01	**Content Creator / Prosumer** (Elena)	External Customer (B2C)	Managing personal high-resolution photos, raw videos, and local design files.	Quickly reclaim SSD storage; ensure zero loss of valuable original assets; simple visual comparison.	Fear of deleting the wrong file; sluggish manual file organization; cloud storage limit alerts.	PySide6 Desktop GUI, Drag & Drop zone, File Preview widget, Archive Restore button (`Ctrl+Z`).
SH-02	**Corporate IT Administrator** (Marcus)	Enterprise Customer (B2B)	Maintaining workstations, network attached storage	Automated scheduled scans; zero manual intervention	Disk full crashes on shared file servers; lack of central	Headless CLI (`run.py scan`), Service Daemon

			storage	intervention	of central	Daemon

👥 Phase 3: Stakeholder Analysis & Power-Interest Matrix

Stakeholder ID	Stakeholder Name & Role	Organizational Domain	Primary Responsibilities	Key Goals & Expectations	Core Pain Points	System Touchpoints
			(NAS), and office server capacity.	; low CPU/ RAM overhead on workstations.	visibility; script maintenance overhead.	(`run.py service`), YAML config (`~/.config/duplicate-bin/config.yaml`).
SH-03	**Business Owner / Agency Director** (Sophia)	Enterprise Customer (B2B)	Approving software budgets and managing cloud storage operational expenses.	Reduce cloud storage bills (Google Drive, Dropbox); track aggregate company storage savings.	Unpredictable escalating monthly SaaS storage fees; lack of ROI visibility.	Central SaaS Web Portal (`/api/dashboard/stats`), Credit Purchase Screen (`/api/billing/buy-credits`).
SH-04	**Security & Compliance Auditor** (David)	Enterprise Governance	Ensuring enterprise data protection, privacy compliance, and zero	Guarantee that company files are not uploaded to unauthorized cloud	Third-party cloud apps exfiltrating proprietary IP; accidental deletion of	Local-only hash architecture, System Directory Protection (`UNSAFE_DI`

			and zero	d cloud	deletion of	(`UNSAFE_DI`

👥 Phase 3: Stakeholder Analysis & Power-Interest Matrix

Stakeholder ID	Stakeholder Name & Role	Organizational Domain	Primary Responsibilities	Key Goals & Expectations	Core Pain Points	System Touchpoints
			data leakage.	servers; prevent path injection.	audit records.	`RS`), JSON Checkpoint integrity.
SH-05	**Product Owner (PO)**	Internal Delivery	Prioritizing backlog, defining release roadmaps, and steering monetization models.	Achieve product-market fit; convert free desktop users to SaaS subscribers; maximize usability.	Balancing free open-source feature expectations against SaaS monetization gates.	JIRA Backlog, Product Roadmap (`SAAS_ANALYSIS_AND_STRATEGY.md`), Feature Checklist (`FEATURES_COMPLETE.md`).
SH-06	**Lead Software / Solution Architect**	Internal Delivery	Designing engine architecture, threading models, and cross-platform packaging.	Sub-second hash caching; thread-safe Qt progress reporting; clean API boundary separation.	Python Global Interpreter Lock (GIL) limits; cross-platform packaging quirks (Debian vs PyInstaller).	Core Engine (`detection.py`, `hashing.py`), FastAPI SaaS (`main.py`), Build Scripts (`build_windows.py`).
SH-07	**QA / Test**	Internal	Validating	100%	Mocking	Pytest suite

	QA / Test	Internal	Validating	100%	Mocking	Pytest suite

👥 Phase 3: Stakeholder Analysis & Power-Interest Matrix

Stakeholder ID	Stakeholder Name & Role	Organizational Domain	Primary Responsibilities	Key Goals & Expectations	Core Pain Points	System Touchpoints
	Engineer	Delivery	detection accuracy, performance benchmarks, and regression suites.	detection accuracy; zero false positives; automated stress testing across 100k files.	massive file systems; testing race conditions in multi-threaded file traversal.	(`tests/`), Integration Scripts (`verify_saas_integration.py`, `verify_backend.py`).
SH-08	**Senior Technical Business Analyst (Candidate)**	Internal Delivery	Eliciting requirements, modeling business processes, documenting BRD/FRD, and bridging tech-business gap.	Complete requirement traceability; verifiable KPI formulas; transparent risk management.	Scope creep between desktop utility and full enterprise SaaS cloud synchronization.	Requirements Catalog, RTM, Process Flow Diagrams, Data Dictionary, API Specifications.

2. Mendelow's Power-Interest Grid

```
HIGH POWER  |
            |  [KEEP SATISFIED]                  [MANAGE CLOSELY]
            |  - Security & Compliance (SH-04)   - Product Owner (SH-05)
            |  - Corporate IT Admin (SH-02)      - Business Owner / Director (SH-03)
            |
            |──────────────────────────────────────────────────────────
```

```
             |  [MONITOR / MINIMAL EFFORT]        [KEEP INFORMED]
             |  - External Package Maintainers    - Content Creators / Prosumers (SH-01)
             |                                    - QA / Test Engineers (SH-07)
             |                                    - Lead Architect (SH-06)
             |
LOW POWER    └──────────────────────────────────────────────────────────
           LOW INTEREST                                  HIGH INTEREST
```

Strategic Engagement Recommendations:

1. **Manage Closely (High Power, High Interest):**
   - **Business Owner (SH-03):** Provide weekly ROI dashboards demonstrating storage megabytes saved converted into financial dollar savings.
   - **Product Owner (SH-05):** Align on sprint priorities using MoSCoW methodology; track credit monetization metrics.
2. **Keep Satisfied (High Power, Low Interest):**
   - **Security Auditor (SH-04):** Provide formal architecture proofs demonstrating that file contents are hashed strictly on the local machine and never transmitted over the network.
   - **Corporate IT Admin (SH-02):** Deliver robust CLI exit codes, silent background daemon options, and zero-dependency packaging.
3. **Keep Informed (Low Power, High Interest):**
   - **Content Creators (SH-01):** Solicit usability feedback via telemetry and community forums; ensure UI provides instant visual reassurance (thumbnails, undo buttons).

3. Stakeholder RACI Matrix

Project Capability / Deliverable	SH-01 (Prosumer)	SH-02 (IT Admin)	SH-03 (Owner)	SH-04 (Security)	SH-05 (PO)	SH-06 (Architect)	SH-07 (QA)	SH-08 (BA)
