Phase 15: Resume Claim & Credibility Audit

Document Code: RCA-DOC-001

Project: Duplicate Bin Ecosystem

Purpose: Pre-Interview Defense Audit of Numerical & Impact Statements

Color Code: 🟢 GREEN (Strongly Supported) | 🟡 YELLOW (Partially Supported / Context Required) | 🔴 RED (Unsupported / Rewrite Mandated)

1. Resume Claims Audit Ledger

ID	Resume / Portfolio Claim Statement	Repo Evidence Source	Can Be Calculated?	Mathematical Calculation / Verification	Status	Recommended Truthful Wording for Resume & Interview
RC-01	*"Engineered duplicate detection pipeline delivering 3-5x faster scan speeds through multi-threading."*	README.md#L20, PERFORMANCE_FEATURES.md#L56	**Yes**	10k files scan completed in 18.7s with 4 threads vs ~80s single-threaded ($4.45\times$).	🟢 **GREEN**	*"Spearheaded requirements for a multi-threaded detection engine delivering 3-5x faster processing throughput on multi-core workstations."*
RC-02	*"Achieved 87% scan time reduction on*	README.md#L228-L235	**Yes**	$\frac{222.0 - 28.4}{222.0} \times 100 = \mathbf{87.2}	🟢 **GREEN**	*"Architected requirements for persistent SQLite caching*

	reduction on			\mathbf{87.2		*SQLite caching*

ID	Resume / Portfolio Claim Statement	Repo Evidence Source	Can Be Calculated?	Mathematical Calculation / Verification	Status	Recommended Truthful Wording for Resume & Interview
	100k files through persistent SQLite hash caching."			1\%}$ time reduction ($7.82\times $ speedup).		*(WAL mode), reducing re-scan latency by 87% (from 3m 42s to 28.4s) on 100,000 files."*
RC-03	*"Delivered 30 advanced product features across core detection, performance, UI, and extensibility."*	docs/FEATURES_COMPLETE.md#L1-L40	**Yes**	30 enumerated and documented features verified in code and checklist.	🟢 **GREEN**	*"Managed product backlog and acceptance criteria across 30 enterprise features including cryptographic hashing, safe archiving, and plugin architecture."*
RC-04	*"Guaranteed zero data loss through a reversible safe quarantine*	duplicate_bin/engine/archive.py#L20-L125	**Yes**	Tested 100% recovery of file data and folder hierarchy via JSON	🟢 **GREEN**	*"Eliminated user fear of data loss by specifying a non-destructive*

	quarantine			JSON		*destructive*

Phase 15: Resume Claim & Credibility Audit

ID	Resume / Portfolio Claim Statement	Repo Evidence Source	Can Be Calculated?	Mathematical Calculation / Verification	Status	Recommended Truthful Wording for Resume & Interview
	archive system."			manifests.		*quarantine archive with single-click instant rollback (Ctrl+Z)."*
RC-05	*"Enabled 20x faster rescans on local drives."*	README.md #L113	**Partially**	Benchmark table records 4.45x (10k files) and 7.82x (100k files). 20x is an unverified upper-bound claim.	🟡 **YELLOW**	*"Specified persistent hash caching yielding up to 7.8x faster rescans on local SSDs, with projected speedups up to 20x on high-latency storage."*
RC-06	*"Reduced client memory consumption by 17x using adaptive streaming chunking."*	README.md #L112	**Partially**	Streaming chunks (4KB-1MB) bound RAM to < 180 MB on 10k files, but the exact "17x"	🟡 **YELLOW**	*"Bounded memory consumption below 200 MB on 10k files and 850 MB on 100k files by mandating*

				"17x"		*mandating*

Phase 15: Resume Claim & Credibility Audit

ID	Resume / Portfolio Claim Statement	Repo Evidence Source	Can Be Calculated?	Mathematical Calculation / Verification	Status	Recommended Truthful Wording for Resume & Interview
				multiplier has no raw baseline trace in repo.		*adaptive chunk streaming over whole-file loading."*
RC-07	*"Saved enterprise clients $50,000 annually in AWS cloud storage expenses."*	None in repository	**No**	Zero commercial customer billing records exist in the repository; platform is in v0.2.0 / v1.0.0 beta transition.	🟥 **RED**	**DO NOT CLAIM THIS.** *Truthful alternative: "Designed commercial hybrid SaaS monetization and ROI models projected to reduce team cloud storage footprint by 15% to 35%."*
RC-08	*"Implemented enterprise-grade AES-256 HSM cloud encryption*	docs/SECURITY_COMPLIANCE.md#L20-L65	**No**	While documented in security strategy, code implements	🟥 **RED**	**DO NOT CLAIM AS IMPLEMENTED CODE.** *Truthful alternative:*

	encryption			implements		*alternative:*

Phase 15: Resume Claim & Credibility Audit

ID	Resume / Portfolio Claim Statement	Repo Evidence Source	Can Be Calculated?	Mathematical Calculation / Verification	Status	Recommended Truthful Wording for Resume & Interview
	with Intel SGX confidential computing."			local hashing and standard HTTPS/TLS with SQLite/ FastAPI.		*"Authored enterprise security and compliance specifications detailing data-at-rest encryption, zero-trust local processing, and SOC 2 alignment."*
RC-09	*"Built hybrid SaaS backend supporting multi-device pairing and real-time WebSocket orchestration ."*	backend/ app/main.py, tests/ verify_saas_integration.py	**Yes**	Fully verified FastAPI server with JWT, 6-digit pairing, and bi-directional WebSockets.	🟢 **GREEN**	*"Specified REST and WebSocket contracts for a FastAPI hybrid SaaS backend enabling 6-digit device pairing and remote scan triggering."*
RC-10	*"Localized desktop application*	duplicate_bin/ui/ main_windo	**Partially**	Language switcher and core action	🟡 **YELLOW**	*"Introduced internationalization (i18n)*

	application	main_windo		core action		*ation (i18n)*

	into 6 global languages."	w.py		keys exist for 6 languages, but secondary dialogs remain in English.		*framework supporting 6 initial languages (English, Spanish, French, German, Chinese, Japanese).*"

2. Interview Defense Strategy for Questionable Claims

Strategy 1: Defending Speedup Claims (Claim RC-02 vs RC-05)

- **Interviewer Cross-Question:** "*You claim an 87% time reduction, but your marketing mentions 20x. Which number did you actually measure, and how did you calculate it?*"
- **Strong BA Response:**

  "*The 87.21% time reduction is directly calculated from our controlled benchmark table on a 100,000-file corpus. The initial cold scan took 222 seconds (3 minutes 42 seconds), while the cached rescan completed in 28.4 seconds. Using the standard percentage reduction formula, that is an exact 87.21% reduction, or a 7.82x speedup. While marketing materials cite a theoretical 20x upper bound for high-latency spinning hard drives or network NAS shares where disk seek latency is astronomical, I stand behind our empirically verified 87% reduction on standard SSDs.*"

Strategy 2: Handling Aspirational vs. Implemented Architecture (Claim RC-08)

- **Interviewer Cross-Question:** "*Your security document mentions Hardware Security Modules (HSMs) and Intel SGX enclaves. Did you implement those?*"
- **Strong BA Response:**

  "No, and as a rigorous Technical Business Analyst, I make a clear distinction between what is currently implemented in code versus our architectural compliance roadmap. In our v0.2.0 release, our actual security control is Zero-Trust Local Processing—meaning all file contents are hashed on the client machine and never leave the user's network boundary. The HSM and SGX documentation represents our enterprise compliance target specification for our Phase 3 enterprise cloud connector release."
