Phase 32: Credibility Audit & Statement Defense Ledger

Document Code: CRD-AUD-001

Project: Duplicate Bin Ecosystem

Governance: Absolute Professional Honesty & Zero Hallucination Standard

Classification Framework: VERIFIED | CALCULATED | ESTIMATED | ASSUMED | UNVERIFIABLE | UNSUPPORTED

1. Credibility Audit Ledger

Statement / Claim Under Audit	Repository Evidence & Path	Can I Defend It?	Confidence	Audit Classification	Truthful & Defensible Recommended Wording
Claim 1: "Scanned 10,000 files in 18.7 seconds on standard multi-core hardware."	README.md#L231, scripts/test_performance.py	**Yes**	100%	**VERIFIED**	*"Achieved high-velocity initial scanning, processing 10,000 files in 18.7 seconds during controlled benchmark runs."*
Claim 2: "Reduced rescan latency by 87% (7.82x speedup) on 100,000 files."	README.md#L228-L235	**Yes**	100%	**CALCULATED**	*"Engineered persistent SQLite hash caching yielding an 87.21% latency reduction (from 3m 42s to 28.4s) on 100k files."*

Statement / Claim Under Audit	Repository Evidence & Path	Can I Defend It?	Confidence	Audit Classification	Truthful & Defensible Recommended Wording
Claim 3: "Enabled 20x faster rescans."	README.md#L113	**With Caveat**	50%	**UNVERIFIABLE**	*"Do not cite 20x as an absolute fact. State that benchmarks prove up to 7.82x on SSDs, with theoretical projections up to 20x on high-latency HDDs."*
Claim 4: "Reduced memory usage by 17x using adaptive streaming chunks."	README.md#L112, PERFORMANCE_FEATURES.md#L65	**With Caveat**	60%	**UNVERIFIABLE**	*"Do not state '17x'. State: 'Bounded client RAM usage below 180 MB on 10,000 files by implementing streaming chunk buffers (4KB-1MB).' "*
Claim 5: "Delivered 30 advanced features across detection, performance, UI, and	docs/FEATURES_COMPLETE.md#L1-L40	**Yes**	100%	**VERIFIED**	*"Managed requirements, backlog, and UAT acceptance across all 30 enterprise features defined*

UI, and					*features defined*

Statement / Claim Under Audit	Repository Evidence & Path	Can I Defend It?	Confidence	Audit Classification	Truthful & Defensible Recommended Wording
plugins."					*in the product roadmap."*
Claim 6: "Guaranteed 100% data recovery via safe quarantine archive rollback."	duplicate_bin/engine/archive.py#L20-L125	**Yes**	100%	**VERIFIED**	*"Eliminated accidental data loss by specifying a non-destructive quarantine archive with verified instant single-click restoration."*
Claim 7: "Saved commercial enterprise clients $50,000 in AWS cloud bills."	None in repository	**NO**	0%	**UNSUPPORTED**	**STRIKE THIS ENTIRELY FROM RESUME.** Replace with: *"Designed hybrid SaaS monetization and storage governance models projected to reduce team cloud storage footprint by 15% to 35%."*
Claim 8:	docs/	**NO**	10%	**UNSUPPORTE**	**DO NOT CLAIM**

Claim 8:	docs/	**NO**		**UNSUPPORTE**	**DO NOT CLAIM**

Phase 32: Credibility Audit & Statement Defense Ledger

Statement / Claim Under Audit	Repository Evidence & Path	Can I Defend It?	Confidence	Audit Classification	Truthful & Defensible Recommended Wording
"Implemented enterprise-grade AES-256 HSM cloud key rotation with Intel SGX."	SECURITY_COMPLIANCE.md#L20-L65	**(Aspirational)**		**D IN CODE**	**AS IMPLEMENTED CODE.** Replace with: *"Authored security and compliance specifications detailing data protection, zero-trust local processing, and future enterprise HSM alignment."*
Claim 9: "Built FastAPI backend with 6-digit device pairing and WebSocket command dispatch."	backend/app/main.py, tests/verify_saas_integration.py	**Yes**	100%	**VERIFIED**	*"Specified REST and WebSocket contracts for a FastAPI hybrid SaaS backend supporting frictionless 6-digit device pairing and remote scan triggering."*
Claim 10: "Provisioned 10 GB of free	backend/app/models.py#L13	**Yes**	100%	**VERIFIED**	*"Defined the credit ledger architecture in*

10 GB of free					*architecture in*

Phase 32: Credibility Audit & Statement Defense Ledger

Statement / Claim Under Audit	Repository Evidence & Path	Can I Defend It?	Confidence	Audit Classification	Truthful & Defensible Recommended Wording
deduplication credits on user onboarding."					*SQLAlchemy, granting a default 10 GB free deduplication credit balance upon registration."*

2. Interview Defense Golden Rules

1. **Be Transparent About the Beta / Transition Status:**

   "The Duplicate Bin desktop core is at release v0.2.0, while our FastAPI SaaS relay is currently in v1.0.0 integration beta. We have fully verified our backend pairing and telemetry via automated integration tests (`verify_saas_integration.py`), and we are preparing for corporate fleet pilot rollouts."

2. **Never Convert Compliance Targets into Historical Facts:**

   If an interviewer points to the HSM/Intel SGX text in `SECURITY_COMPLIANCE.md`, immediately state: *"That document represents our forward-looking Enterprise Security Target Architecture for Phase 3 enterprise sales. In our current v0.2.0/v1.0.0 release, our primary security control is Zero-Trust Local Processing, where file contents never leave the user's physical machine."*

3. **Stand Firm on Verified Calculations:**

   When defending the 87% reduction or the 18.7s scan time, show your mathematical work with total confidence.
