Resume Claim & Quantitative Evidence Audit — WariMitra

Document Identifier: WM-RCA-015

Classification: Resume Credibility Review & Truthful Phrasing Framework

Standard: Professional BA Credibility & Evidence-Based Verification

Target Audience: Job Candidates, Interview Coaches, Technical Recruiters

Color Code: 🟢 **GREEN** (Strongly Supported) | 🟡 **YELLOW** (Partially Supported / Context Needed) | 🔴 **RED** (Unsupported / Rewrite Mandated)

1. Executive Audit Philosophy

When presenting technical projects in Business Analyst and Product Owner interviews, candidates frequently make numerical claims on their resumes (e.g., "*Improved response time by 50%*" or "*Scaled to 1 million users*"). A skilled senior interviewer will immediately drill into these numbers with 5 levels of follow-up questions:

* *Where was this measured?*
* *What was the exact baseline?*
* *What formula was used?*
* *Who signed off on the data?*
* *What sample size was evaluated?*

This document audits common resume claims against the **actual repository evidence** of WariMitra, assigning a credibility status and providing bullet-proof, truthful alternative wording.

2. Comprehensive Resume Claim Audit Table

Resume Claim / Statement	Codebase Evidence Path	Can Be Mathematically Calculated?	Formula / Calculation	Status	Recommended Truthful Wording for Resume / Interview
"Engineered emergency	`README.md:243`,	**Yes**	Direct p95 load	🟢 **GREEN**	*"Architected a serverless*

emergency	`3`,		load		*serverless*

Resume Claim / Statement	Codebase Evidence Path	Can Be Mathematically Calculated?	Formula / Calculation	Status	Recommended Truthful Wording for Resume / Interview
SOS system achieving sub-2s response time (1.2s p95)."	`ARCHITECTURE.md:428`, `functions/src/index.ts:20-116`		benchmark of Cloud Function execution and Firestore persistence.		*emergency SOS pipeline on Firebase Cloud Functions (asia-south1) achieving 1.2s p95 creation latency under load testing with built-in idempotency and rate limiting."*
"Reduced emergency medical response time by 50% across 500,000+ pilgrims."	`docs/BRD.md:34`, `VARIMITRA_SPEAKER_CONTEXT.md:60`	**No** (Historical dispatch data absent)	Assumed baseline (45m) vs modeled dispatch (20m) yields ~55%, but repo has no field logs.	🟡 **YELLOW**	*"Formulated functional requirements and target KPIs for GovTech emergency dispatch, targeting a 50% reduction in response time through automated GPS routing to nearest responders and medical camps."*
"Architected a Web3 blockchain trust layer	`docs/WEB3_ARCHITECTURE.md`, `functions/`	**Yes**	Employs 0-ETH transactions on Sepolia	🟢 **GREEN**	*"Designed a zero-gas-cost Web3 Trust Layer utilizing*

trust layer	`functions/`		on Sepolia		*utilizing*

Resume Claim / Statement	Codebase Evidence Path	Can Be Mathematically Calculated?	Formula / Calculation	Status	Recommended Truthful Wording for Resume / Interview
anchoring emergency incident logs at ₹0 cost."	`src/trustLayer/`		testnet embedding SHA-256 event snapshots in tx hex data.		*asynchronous 0-ETH transactions on Ethereum Sepolia to cryptographically anchor SHA-256 snapshots of critical emergency state transitions for tamper-evident auditing."*
"Designed geospatial search querying medical relief camps within 10 km in under 500ms."	`functions/src/index.ts:122-177`, `ARCHITECTURE.md:429`	**Yes**	Evaluates Geohash bounding boxes with Haversine distance pruning; p95 read is 320ms.	🟢 **GREEN**	*"Defined specifications for Geohash-based proximity medical discovery, allowing field teams to query active relief clinics and available bed capacity within 10 km at 320ms p95 read latency."*
"Implemented an AI-powered computer vision engine	`VARIMITRA_SPEAKER_CONTEXT.md:164` explicitly states: *"No ML*	**No** (Feature not implemented)	N/A (Codebase only contains basic photo upload form	🔴 **RED**	**DO NOT CLAIM THIS.** Replace with: *"Authored functional specifications and*

vision engine	states: "*No ML*		upload form		*specifications and*

Resume Claim / Statement	Codebase Evidence Path	Can Be Mathematically Calculated?	Formula / Calculation	Status	Recommended Truthful Wording for Resume / Interview
achieving 95% accuracy in matching missing persons."	*model in codebase - FUTURE ROADMAP*"		to Firebase Storage).		*intake workflows for a missing person intake module with photo upload and police verification, defining the future roadmap for ML-based facial matching.*"
"Deployed a deep learning neural network to forecast crowd stampedes and surges."	`VARIMITRA_SPEAKER_CONTEXT.md:160,171` states: "*Mathematical heuristics (Little's Law, NOAA Index), NOT trained ML*"	**No** (Deterministic heuristics only)	Code implements deterministic mathematical formulas, not neural networks.	🔴 **RED**	**DO NOT CLAIM THIS.** Replace with: "*Designed operational crowd telemetry workflows utilizing mathematical heuristics (Little's Law for queue wait times and NOAA Heat Index) to identify crowd bottlenecks on GIS dashboards.*"
"Optimized cloud operational costs to	`ARCHITECTURE.md:452-463`	**Yes** (Cost model projection)	Capacity model based on 100M Firestore reads	🟢 **GREEN**	*"Developed a serverless cloud capacity and cost-optimization*

costs to			Firestore reads		*optimization*

Resume Claim / Statement	Codebase Evidence Path	Can Be Mathematically Calculated?	Formula / Calculation	Status	Recommended Truthful Wording for Resume / Interview
~$185/month for 1M active users."			($60) + 50M writes ($90) + compute/ storage ($35.25).		*model projecting monthly infrastructure expenditure of ~$185 per 1M active users on Firebase Blaze pay-as-you-go tiers."*
"Managed a team of 15 developers and delivered the project on an enterprise Oracle DB."	Entire repo is built on Firebase / NoSQL and originated in an agile hackathon team.	**No**	Contradicts architecture evidence in `README.md` and `firestore.rules`.	🟥 **RED**	**DO NOT CLAIM THIS.** Replace with: *"Collaborated in a cross-functional agile squad (Team Chaos) reverse-engineering requirements and validating technical architecture across Flutter, Next.js, and Cloud Firestore."*

3. Resume Bullet Point Optimization Guide

Weak / Vulnerable Bullet Point:

❌ *"Built an AI app for Wari pilgrimage that reduced response times by 50% and tracked 1 million users on blockchain."*

Interviewer Trap: The interviewer will ask: "*Which AI model did you train? What were the training datasets? How did you pay for gas fees on 1 million transactions?*" When you can't answer, your credibility collapses.

Strong / Bullet-Proof Bullet Point:

🟢 *"Reverse-engineered business requirements and technical specifications for WariMitra, a GovTech mass-gathering platform engineered on Firebase (asia-south1) and Next.js 15, delivering sub-2s emergency SOS ingestion with Geohash-based medical camp radar, 7-role RBAC, and an innovative zero-gas-cost Web3 cryptographic audit ledger."*

Interviewer Response: The interviewer will be impressed by your precise understanding of latency benchmarks, geospatial queries, security rules, and architectural trade-offs.
