Comprehensive Credibility & Claim Defense Audit — WariMitra

Document Identifier: WM-CRD-AUDIT-032

Classification: Project Truthfulness & Ethical Defense Register

Standard: International Business Analysis Standards & Interview Integrity

Rule of Representation: Never hide unsupported claims. Classify every statement transparently to bullet-proof candidate credibility.

1. Classification Definitions

- **VERIFIED:** Directly substantiated by executed code, database security rules, or benchmark data files.
- **CALCULATED:** Derived using a transparent mathematical formula applied to real baseline and measured values.
- **ESTIMATED:** Capacity sizing or cloud cost model based on published vendor pricing cards.
- **ASSUMED:** Logical deduction based on standard industry or governmental operating procedures.
- **UNVERIFIABLE:** Plausible business target from project pitch decks that lacks historical baseline logs in the repository.
- **UNSUPPORTED:** Claim that is absent from or contradicted by repository evidence; must be rewritten or removed.

2. Complete Credibility Audit Table

Statement / Claim	Codebase Evidence	Repository File & Line	Can I Defend It in an Interview?	Confidence	Audit Classification	Recommended Truthful Wording
"Sub-2s SOS	Recorded latency	`README.md:243`,	**Yes**	High	**VERIFIED**	*"Engineered a serverless*

SOS	latency	`243`,				*a serverless*

Statement / Claim	Codebase Evidence	Repository File & Line	Can I Defend It in an Interview?	Confidence	Audit Classification	Recommended Truthful Wording
creation latency achieved (1.2s p95)."	benchmark in repository architecture documentation.	`ARCHITECTURE.md:428`				*emergency SOS pipeline on Firebase Cloud Functions achieving 1.2s p95 creation latency under load tests."*
"Firestore read queries execute in 320ms (p95)."	Documented database read performance benchmark.	`README.md:244`, `ARCHITECTURE.md:429`	**Yes**	High	**VERIFIED**	*"Optimized Firestore composite indexing and Geohash spatial queries, achieving 320ms p95 read latency for camp searches."*
"Real-time command center updates propagate	Measured WebSocket listener propagation delay.	`README.md:245`, `ARCHITECTURE.md:430`	**Yes**	High	**VERIFIED**	*"Implemented Firestore real-time snapshot listeners*

Statement / Claim	Codebase Evidence	Repository File & Line	Can I Defend It in an Interview?	Confidence	Audit Classification	Recommended Truthful Wording
propagate						*listeners*
in 1.5s (p95)."						*delivering incident updates to the web dashboard within 1.5s p95 without polling."*
"Enforced rate limit of 5 SOS alerts per minute per user."	Hardcoded validation logic in Cloud Functions querying previous 60,000ms.	`functions/src/index.ts:59-70`	**Yes**	High	**VERIFIED**	*"Specified anti-abuse rate-limiting rules capping emergency distress requests to 5 per minute per user account."*
"Enforced strict geofencing rejecting coordinates outside India."	Bounding box coordinates ($8-35^\circ\text{N}, 68-97.5^\circ\text{E}$) in Cloud Function.	`functions/src/index.ts:73-80`	**Yes**	High	**VERIFIED**	*"Implemented sovereign geofencing logic rejecting pings originating outside India bounds to mitigate*

						mitigate remote spoofing."
"Web3 trust layer anchors event proofs to Ethereum Sepolia at ₹0 cost."	Asynchronous 0-ETH self-transactions embedding SHA-256 hash in tx hex data.	`docs/WEB3_ARCHITECTURE.md`, `functions/src/trustLayer/`	**Yes**	High	**VERIFIED**	*"Designed a zero-gas-cost Web3 Trust Layer using asynchronous 0-ETH transactions on Sepolia testnet to anchor tamper-evident audit proofs."*
"Cloud infrastructure costs estimated at ~$185/month for 1M users."	Itemized capacity calculation model based on Firebase Blaze list rates.	`ARCHITECTURE.md:452-463`	**Yes**	Medium	**ESTIMATED**	*"Developed a serverless cloud capacity planning model projecting monthly infrastructure expenditure of ~$185 per 1M active users."*

Statement / Claim	Codebase Evidence	Repository File & Line	Can I Defend It in an Interview?	Confidence	Audit Classification	Recommended Truthful Wording
"Reduced emergency medical response time by 50% across the pilgrimage."	Mentioned as strategic KPI target in BRD, but repository contains no historical pre-digital dispatch logs.	`docs/BRD.md:34`	**Context Required**	Low	**UNVERIFIABLE**	*"Formulated operational KPIs targeting a 50% reduction in emergency response time through automated GPS routing to nearest responders."*
"Implemented an AI deep-learning computer vision engine for missing persons."	Codebase contains only basic photo upload form to Cloud Storage; speaker context explicitly notes ML is not implemented.	`VARIMITRA_SPEAKER_CONTEXT.md:164`	**NO**	Zero	**UNSUPPORTED**	**DO NOT CLAIM.** Rewritten: *"Designed functional intake workflows for missing persons reporting with photo upload, defining the future roadmap for*

Statement / Claim	Codebase Evidence	Repository File & Line	Can I Defend It in an Interview?	Confidence	Audit Classification	Recommended Truthful Wording
						roadmap for ML-based facial matching."
"Built an AI neural network to predict crowd stampedes."	Codebase implements deterministic mathematical heuristics (Little's Law and NOAA Heat Index), not trained machine learning models.	`VARIMITRA_SPEAKER_CONTEXT.md:160-162`	**NO**	Zero	**UNSUPPORTED**	**DO NOT CLAIM.** Rewritten: *"Engineered crowd management workflows utilizing mathematical heuristics (Little's Law and NOAA Heat Index) to identify crowd bottlenecks on GIS dashboards."*
